EDUCATION

Indian Institute of Information Technology Manipur

B.Tech in Computer Science and Engineering, CPI: 8.65

Manipur, India

Aug 2023 – Jun 2027

EXPERIENCE

Software Developer Intern – KickBegin

MERN Stack, TypeScript, Python

Remote

May 2026 – Present

- Built a multi-agent RAG pipeline for AI-powered interviews using Python microservices and a ChromaDB-backed Embedding Service for semantic question generation.
- Integrated Google Gemini API for resume parsing and AI-driven answer evaluation.
- Assisted in deploying the full-stack application on AWS EC2 using Docker Compose, helping containerize services, configure the deployment environment, and troubleshoot production issues.
- Guided a junior developer by providing technical guidance, assisting with debugging, and reviewing code.

PROJECTS

MediSlot – Doctor Appointment Scheduling Platform

MERN Stack, JWT, Bcrypt, Tailwind CSS

May 2026 – Present

- Designed and built a full-stack, multi-tenant platform featuring three distinct user workflows (Patient, Doctor, Administrator) to streamline consultation bookings and schedule management.
- Engineered a secure RESTful API using Node.js, Express, and MongoDB, integrating Stripe and Razorpay payment gateways with webhook-verified server-side endpoints to process, verify, and secure consultation fees.
- Built an algorithm for doctor availability with automatic slot allocation, cancellation, and double-booking prevention.

MindLens – Multimodal Mental Health Analysis System

Python, PyTorch, BERT, Librosa, OpenCV, FastAPI, React

Jan 2026 – April 2026

- Built a multimodal AI system leveraging text, audio, and facial data for detecting mental health conditions.
- Developed deep learning models (BERT, CNN, Wav2Vec2) and applied fusion strategies for unified risk scoring.
- Built scalable FastAPI endpoints with real-time inference, SHAP-based explainability, and LSTM models to analyze temporal emotional patterns and detect mental health deviations.

ResJo AI – AI-Powered Resume Builder & Job Recommendation

MERN, Gemini API, Tailwind CSS

Nov 2025 – Feb 2026

- Engineered a shareable public profile system with unique token-based URLs and Redis-cached skill-match scoring engine that ranks live job listings (ingested every 72h via JSearch API) against user resumes.
- Built an AI-powered resume chatbot with ATS scoring and skill-gap analysis using LLMs.
- Designed an automated job ingestion pipeline using AI search, Gmail API, and MongoDB storage.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, JavaScript

Machine Learning: Supervised/Unsupervised Learning, Feature Engineering, Model Evaluation

Deep Learning: CNN, RNN, LSTM, Transformers (BERT, RoBERTa), Wav2Vec2

Frameworks: React, Node.js, Express.js, PyTorch, TensorFlow

Libraries: Scikit-learn, Pandas, NumPy, OpenCV, Librosa

Databases: MongoDB, MySQL

MLOps & Tools: FastAPI, Docker (basic), Git, REST APIs

Relevant Coursework: Database Management System, Operating System, Data Structures and Algorithms, Object-Oriented Programming, Computer Networks

ACHIEVEMENTS

- Secured **99th rank** and awarded the **Bronze Medal** at the ICPC Asia Taiwan Regional Contest.
- Secured **732nd rank** out of **80,000+ teams** in the Amazon ML Challenge 2025.
- Selected as an **Open-Source Contributor in SSOC**.
- Solved **650+ problems** on LeetCode and Codeforces.
